NOTIFICATION

New Delhi, the 21st October 1950

S.R.O. 780.—In exercise of the powers conferred by sub-clause (1) of clause 4 of the Vegetable Oil Products Control Order, 1947, as continued in force by sub-section (2) of section 17 of the Essential Supplies (Temporary Powers) Act, 1946 (XXIV of 1946), and in supersession of the notification of the Government of India in the Department of Food No. 5-VP (1)/47, dated the 31st January, 1947, the Vegetable Oil Products Controller for India hereby prohibits the manufacture, stock or sale of any vegetable oil product, which does not conform to the following provisions, namely :—

1. It shall be prepared by hydrogenation from any edible harmless vegetable oils or mixtures thereof except marine, mineral and animal oils. The prior approval of the Vegetable Oil Products Controller for India shall be obtained for admixture of more than 5 per cent of any permissible oil in the product and the name of oil so used shall be clearly indicated on the containers.

2. It shall not contain any harmful colouring, flavouring or any other matter deleterious to health.

3. No colouring shall be added to it unless with the prior sanction of the Vegetable Oil Products Controller and in no event any colour resembling the colour of ghee.

4. If any flavour is used, it shall be distinct from that of ghee in accordance with a list of permissible flavours and in such quantities as may be prescribed by the Vegetable Oil Products Controller for India.

5. It shall not have moisture exceeding 0·25 per cent.

6. The melting point as estimated by the capillary slip method (as described in Note I below) shall be from 33°C to 37°C both inclusive.

7. The Butyro Refractometer reading at 40°C shall not be less than 48·0.

8. It shall not have unsaponifiable matter exceeding 1·25 per cent.

9. It shall not have free fatty acids (calculated as oleic acid) exceeding 0·25 per cent.

10. The product on melting shall be clean and clear in appearance and shall be free from sediment and rancidity and pleasant to taste and smell.

11. It shall contain raw or refined sesame (til) oil not less than 5 per cent, by weight but sufficient so that when the vegetable oil product is mixed with refined groundnut oil in the proportion of 20:80, the red colour produced by the Baudouin test (as described in Note II below) shall not be lighter than 2·0 Red units in a 1 c.c. cell on a Lovibond scale.

12. It shall be manufactured in premises maintained under hygienic conditions.

NOTE I.—The "Capillary Slip Method" is as follows :—

(i) Thin walled glass tube open at both ends with an external diameter of 1·2 to 1·5 m.m. and internal diameter of 0·83 to 1·1 m.m. and length 5 to 6 cm. should be used after proper cleaning and drying.

(ii) The sample of the vegetable oil product should be completely melted and well mixed at a temperature of about 50°C. The capillary tube should be inserted into the molten product so that a column of the product about one cm. long is forced into it. The sample in the tube should be allowed to just set by keeping the tube in a horizontal position during winter, and during summer the tube may be put on a perforated metal tray which is so placed inside a small water bath containing water at 15°C—17°C that the bottom of the tray just touches the water.

(iii) The tube is then placed in a test-tube immersed in water at 15°C—17°C for one hour.

(iv) A thermometer (reading in 1/5th of a degree) should be suspended in the centre of a beaker of water at 10°C, (the beaker is to be provided with a side tube heating arrangements) so that the lower end of the sample column is 3 cms. below the surface of water. The side tube of the apparatus should be heated gently, so that the temperature of water increases slowly at the rate of 2°C per minute till the temperature reaches 25°C and thereafter at the rate of 1/2 a degree per minute.

(v) The temperature of water should be noted when the sample column commences to rise in the tube. This temperature is recorded as the melting point.

The thermometer used in this test should be checked against a standard thermometer calibrated and certified by the National Physics Laboratory, Teddington, England.

414

NOTE II.—The Baudouin test shall be carried out as follows :—

Place in a test tube 5 cc. of the sample (20 parts of vegetable oil products and 80 parts of refined groundnut oil) and 5 cc. of hydrochloric Acid (Specific Gravity 1·19) and add to it 8 drops of 2 per cent solution in alcohol of freshly distilled furfurol, shake vigorously for 2 minutes and allow to stand. The acid layer becomes distinctly red. Quickly filter the acid layer through a wet filter paper and examine the filtrate against a Lovibond scale in a 1 cm. cell or against a red colour comparator.

If the vegetable oil product on being shaken with hydrochloric acid alone, conveys a redness to the hydrochloric acid owing to the presence of certain artificial colouring agents, the procedure is as follows :—

Shake 10 cc. of the melted vegetable oil product in a separating funnel for half a minute with 10 cc. of hydrochloric acid, specific gravity 1·125. Draw off the red acid layer which collects at the bottom of the funnel and repeat the process until no further colouration takes place. During the treatment do not permit the temperature of the contents of the separating funnel to exceed that necessary to keep the sample in liquid condition. After the hydrochloric acid has been completely removed apply the Baudouin test as described aboye.
